consist of advanced indoor, tank-based systems in which fish are grown under very controlled conditions.

The technology utilises mechanical and biological filters to reuse the water, passing it through treatment processes to remove organic waste and keep the high water quality intact.

Recirculating aquaculture systems are used in home aquaria and for fish production where water exchange is limited and the use of biofiltration is required to reduce ammonia toxicity. Other types of filtration and environmental control

are often also necessary to maintain clean water and provide a suitable habitat for fish. The main benefit of RAS is the ability to reduce the need for fresh, clean water while still maintaining a healthy environment for fish. To be operated economically commercial
