Description: Glass as a physical clue is frequently encountered in crimes such as burglary, murder, road accidents, and vandalism. The examination of glass evidence has depended, traditionally, on comparing the physical and chemical characteristics of a

Glass analysis can be helpful in various ways. Glass fragments at a crime scene should always be collected and analyzed because several clues can be gathered about the events that occurred during the crime. Fragments of glass from headlights at a hit-and-run scene can leave clues about the unknown vehicle.

Glass fragments can provide very significant forensic evidence. Glass as a mass-produced material is widely distributed and fragments from broken glass can provide very strong evidence to support a scenario in a specific set of case circumstances. In general, the more parameters identified for the glass

Forensic Glass Analysis Service. Utilising the experience and expertise of our glass experts, Forensic Resources Ltd can provide a comprehensive forensic glass analysis for all types of glass and glass fragments to aid criminal investigations. Glass can be used as evidence in crimes ranging from burglaries, RTA accidents, murder, assault, 'ram-raids,' criminal damage and thefts of motor vehicles amongst other incidents.

Forensic Interpretation of Glass Fragments. TRACES OF GLASS can often become a source of forensic evidence. Glass fragments are regularly encountered at crime scenes, particularly those involving motor-vehicle accidents, car theft, and burglaries. Windows are a common point of entry into buildings for burglars, and large quantities of broken glass may be produced.

A combination of properties subsequently allows forensic examiners to use glass traces as evidence to establish a connection, e.g. between a scene of crime and a suspect. First, glass produces a considerable number of large to minute fragments when shattered.

As the size of the glass fragments decreases, properties such as colour and shape become harder to determine. For that reason, most forensic laboratories use either refractive index (RI) or elemental (chemical composition) analyses.
