well-known inequalities: $a + b > c, a + c > b, b + c > a$. But also useful and frequent substitutions are: $a = x + y, b = y + z, c = z + x$, where $x, y, z > 0$. (3.1) The question is whether there are always positive real numbers x, y, z , such that the above identities (3.1) hold and a, b, c are the sides of the triangle. The answer is positive.
