The throttle position sensor is placed within the throttle body assembly and cannot be adjusted or replaced alone. To remove it, the entire throttle body assembly needs to be taken out. However, before doing so, try to ensure if the ignition switch is turned off. If so, plug out the throttle position sensor connector at first.

The ECM is the control module for this system. The main components of cruise control system are mode control switches, transmission range switch, brake switch, vehicle speed sensor, ECM and ETS motor that connect throttle body. The ECM contains a low speed limit which will prevent system engagement below a minimum speed of 40km/h (25mph).

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the Engine Control Module (ECM) In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM.
