The level set method is just plain easy to understand: there is a surface, it intersects a plane, that gives us a contour and that's it. With image segmentation, the surface is updated with forces derived from the image.

Download Ebook Level Set Methods And Fast

5.7 Level Sets and the Fast Marching Method
The level sets of $f(x, y)$ are the sets on which the function is constant. For example $f(x, y) = x^2 + y^2$ is constant on circles around the origin. Geometrically, a level plane $z = \text{constant}$ will cut through the surface $z = f(x, y)$ on a level set.
