I'd be more worried about Mordin, especially if it was a one-on-one encounter there was prep-time. Garrus, on the other hand, is prone to equal amounts of indecisiveness and recklessness. Based on what we've seen in the games, he's likely to choose engagements he can't win and can suffer decision paralysis when he needs to make even decisions ...

The Inside Track describes the methods Alan used to generate over \$50,000 profit from his betting during 1997. The author has studied many American texts and explains how he has mixed their ideas with his own 30 years experience of British racing and betting. There are no systems, no rules and no guarantees in this book, yet anybody who likes to bet on horse racing is sure to find material here that will challenge accepted beliefs and persuade them to think in new ways about their betting. In his first book, Alan explained that to make a living it was necessary to bet Against The Crowd. This book expands on that and takes the reader inside the mind of one of the most successful professional punters operating in the country. There are separate sections covering Flat racing and Jumping, and also detailed discussions of All-weather racing and the growing world of spread betting.
Nick Mordin estimates he has spent over 30,000 hours researching racing results over the years. His aim has been to uncover the principles that govern the betting market and racing results themselves. In conducting his research Nick has tested thousands of systems, both his own and those developed by academics, professional gamblers and others around the globe. In Winning Without Thinking he shares the fruits of this work, the results of horse-races; basic principles that govern racing results and the betting market; mistakes commonly made by the general betting public and how to exploit them; full details of betting systems used by professional gamblers to make millions; how to predict and profit from new trends; and how to use computers to increase your returns.

How does one effectively aggregate disparate pieces of information that are spread among many different individuals? In other words, how does one best access the "wisdom of the crowd"? Prediction markets, which are essentially speculative markets created for the purpose of aggregating information and making predictions, offer the answer to this question. The effective use of these markets has the potential not only to help forecast future events on a national and international level, but also to assist companies, for example, in providing improved estimates of the potential market size for a new product idea or the launch date of new products and services. The markets have already been used to forecast uncertain outcomes ranging from influenza to the spread of infectious diseases, to the demand for hospital services, to the box office success of movies, climate change, vote shares and election outcomes, to the probability of meeting project deadlines. The insights gained also have many potentially valuable applications for public policy more generally. These markets offer substantial promise as a tool of information aggregation as well as forecasting, whether alone or as a supplement to other mechanisms like opinion surveys, group deliberations, panels of experts and focus groups. Moreover, they can be applied at a macroeconomic and microeconomic level to yield information that is valuable for government and commercial policy-makers and which can be used for a number of social purposes. This volume of original readings, contributed by many of the leading experts in the field, marks a significant addition to the base of knowledge about this fascinating subject area. The book should be of interest to anyone looking at monetary economics, economic forecasting and microeconomics.
