Guide

Thank you very much

for reading **motor**

protection relay

setting calculation

guide. Maybe you

have knowledge that,

File Type PDF

Motor

people have search numerous times for their favorite novels like this motor

protection relay setting calculation guide, but end up in malicious downloads. Rather than reading a good book with a cup of coffee in the afternoon, instead they cope with some infectious bugs inside

File Type PDF

The relay will now use 30% of this ITOT to derive its actual restraint current, i.e.

$I_{rest} = 0.3 \times 0.5 = 0.15A$ (see point P on the restraint characteristic). Now if $IDIFF > 0.15A$ relay operation results.

Alternatively, 0.15A is the minimum diff current required for relay operation if the

Electrical Engineering

From current setting
we calculate the pickup
current of the relay.

Say current setting of
the relay is 150 %

therefore pickup
current of the relay is

$$1 \times 150\% = 1.5 \text{ A.}$$

File Type PDF

Motor

Step-3 Now we have to calculate PSM for the specified faulty current level.
