Multiscale Modeling of Cancer: An Integrated Experimental ...
Multiscale computational models have been used to study the coupled processes involved in tumor cell migration and metastasis, including: 1) invasion of cancer cells into surrounding tissue, 2) intravasation of single cancer cells and cell clusters into the circulation, 3) binding of circulating tumor cells to the microvascular endothelium, 4) extravasation of circulating tumor cells at distant secondary sites in the body, and 5) growth and expansion of metastasized cells . Most models used ...

Herein, a 3D multi-scale mathematical modeling is proposed to study the functions of CSCs in tumor development. The model, extended our previous concept [21], enables us to study the roles of CSCs in tumor progression and chemo-drug resistance by simulating the tumor growth initiated by a set of heterogeneous CSC populations.
